Grid modules

The grid module organizes site content into a cohesive layout, enabling appearance and user interaction customization. Options include shape, size, title, sort, and filter. You can also create multiple tabs with distinct filters and sorting for effective content categorization.

The screenshot displays the 'Editing Module Grid' configuration interface. On the left, the configuration panel includes:

- Editing Module Grid** (Title and close button)
- Name**: Grid
- Tabs - Data Filtering**: First Tab (with a trash icon)
- Design** section with checkboxes:
 - Show Title
 - Show Filter Options
 - Show Sort Options
- Variant**: Circular (dropdown)
- Text Align**: center (dropdown)
- Item Width**: 205, **Item Height**: 205, **Spacing**: 20
- Item Title** (checked), **Item Description** (unchecked), and **Show Progress** (unchecked)

On the right, a grid of content items is displayed with a search bar at the top. The items shown are:

- Storyline SCORM 12 Test...
- Community Building - Int...
- Adapting: Career Develo...
- Digital Engagement Strat...
- Project Management 101
- Modern Web Design

Additional items are partially visible at the bottom, including one with the word 'COMMUNITY'.

Setting up a Grid Module on a page.

Creating a grid module

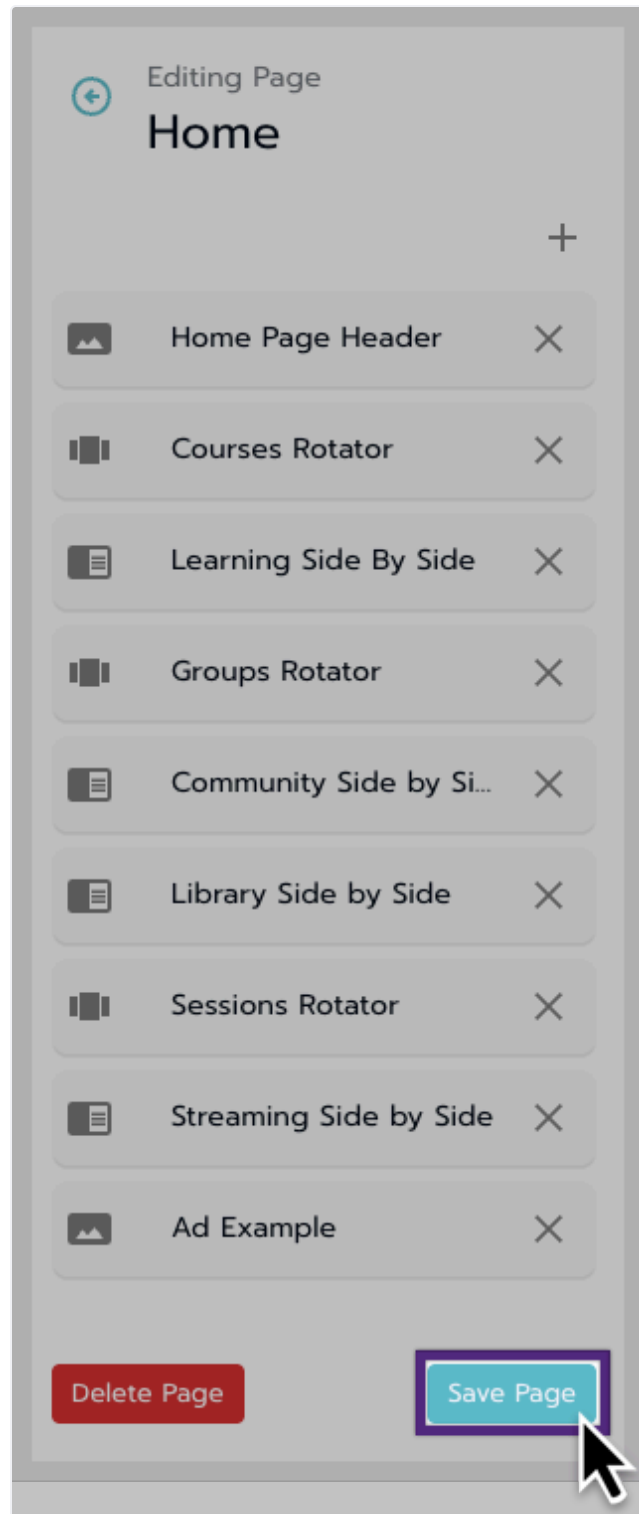

1. Select the **+** to the right of the **Page Title** and select **Grid**.
2. Select the new **Grid** item in the content menu below to start configuring your new grid module.

Module configuration

1. **Name:** Give the Grid a unique **Name** so that you can identify it later. The name doesn't appear on the site page.
2. Fill out the fields listed below to customize your Grid.
3. Select **Save Module** to save your changes when finished.

Saving your changes

- ✔ Remember to save your page updates when you are done editing any module to avoid losing progress by selecting the **Save Page** button.

Saving the changes made to the page.

Design options

Tailor the module's appearance and user interaction through these fields:

Show Title	<p>Check box: Default - On</p> <p>When the check box is unselected:</p> <p>The Title is not shown on the front end to users</p>
Title	Add a title that will show above the module.
Show Filter Options	<p>Check box: Default - Off</p> <p>When selected:</p> <p>Gives the front-end user the ability to filter the content</p>
Show Sort Options	<p>Check box: Default - Off</p> <p>When selected:</p> <p>Gives the front-end user the ability to sort the content</p>
Variant	Select the module shape from the drop-down menu. For example, it can be Circular, rounded, or square . Note that “square” can also be a rectangle; it just means it has hard corners instead of rounded corners.
Text align	Align the titles of each slide (not the module title). We recommend using Left for most content but Center for speakers (because they are circular).
Item width and height	Input 355 (width) x 200 (height) for a standard 16:9 ratio image. This corresponds to the image size (800 x 450) that we request from clients for most rectangular images
Item spacing	10 is the standard recommended spacing.
Item title	Check this box to see the title of the content beneath the slide.
Item description	Check this box to show the content’s preview text beneath the slide.

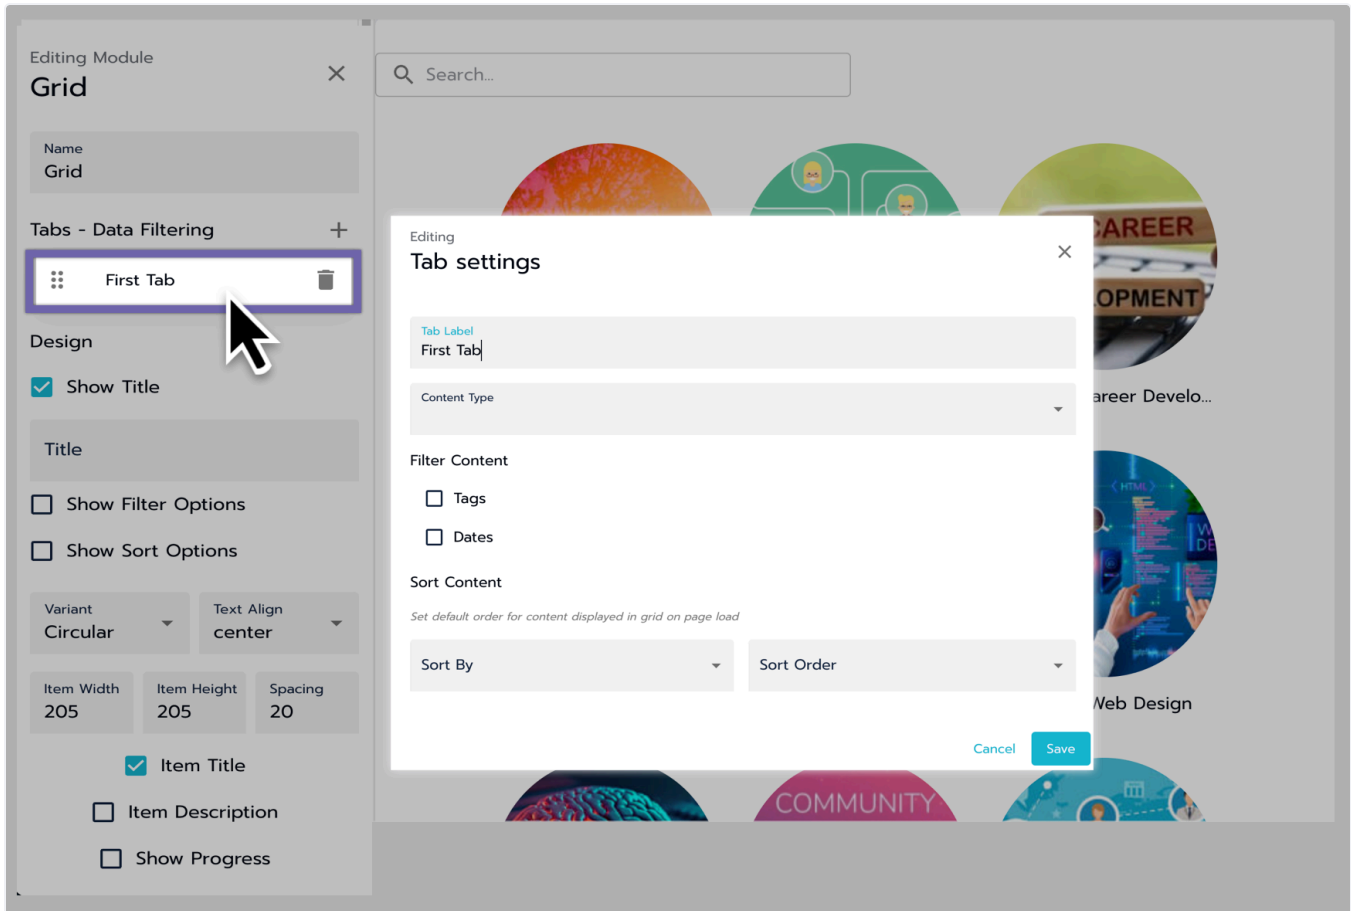

Show Progress

For courses only, check this box to show the progress indicator in the corner of the slide.

Setting up tabs

1. To begin, locate the **Tabs - Data Filtering** section.
 2. Use the **+** icon to add new tabs.
 - The content you pull and organize will be shown within a grid.
 - If you create multiple tabs, the Page will display each as individual tabs above the Grid for easy access.
 - You can reorder tabs by dragging and dropping them.
 - The tabs are aligned from left to right on the page, with the top tab being the first, leftmost tab.
-  If only one tab is created, it will represent the entire page, and you will see no tabs.

Configuring tab settings

Updating the Tabs settings.

Once you've created a tab, select it to adjust its settings.

- **Tab Label:** This is the name visible to users if multiple tabs are created.
- **Content-Type:** options available include **Speaker, Course, Group, Library** and **Session**. Your selection impacts the filtering and sorting options available.

The Tab Settings window determines how the page/tab is pre-filtered and sorted, controlling how information appears when a user lands on the tab. Users can filter or sort the information further, but it will revert to the settings configured here upon leaving and returning.

- **Any table section highlighted in yellow** indicates that the grid options for that content type are either unavailable or not functioning. Check back later for updates.
